## Profile

My name is Jesper Bonde, 1973. I was born and raised on Lolland, in Nakskov. After living 10 years in Copenhagen, I decided to move to Malmö, Sweden, to try something new and exciting, I have lived here since 2004.

During the years I also got an education in commerce and offices, specializing in public management, a position as IT staff, systems developer, IT consultant and SAP BW Consultant.

I am currently employed in Great Nordic Netcom A/S as SAP Business Intelligence Specialist (developer).

In close cooperation with the SAP Architect, SAP support and Navision specialists, I am the last stand when there are issues and problems. GNN is a dynamic company where with a lot of speed and lots of tasks.

My personality is reflected in being responsible, results-oriented, quick witted, inquisitive and supporting business. It is a great honor to be with from analysis to the solution take over. Being able to develop system and user, so the user after completion can maintain the solution themselves, is a pleasure.

In my spare time I am currently learning a little bit of Android development (Eclipse and Java), car repair, enjoying my friends and family.

## SAP

I have since May 2006 been working with both SAP BW/BI and EP. Development, operation, monitoring, debugging, optimization and cleanup is part of everyday life.

All the solutions included data extract, modeling and portal solution. Some of the larger BI projects I have worked with or helped to solve is:

### Management Reporting

A special dashboard solved by using BI WAD and Portal, shows the company's health, finance, HR, scheduled tasks, etc..

### Finance

A complete financial solution which is consistent with Sales on so many dimensions (branches, area, products, etc. ..)

### Sales

A solution that shows sales and its impact on the financial bottom line. Monitoring and budgeting that can be followed on one another company, sales person, department, region and all the way out to customers.

### Logistic & Inventory

A flow of goods from supplier through the enterprise and out to the customer. How far have the orders come in the system and OTIF (On Time In Full) solution in order to handle delays and follow-ups.

### Freight & Sales

A solution where SAP BI on a Navision platform provides a complete picture of customer profitability.

### Excess & Obsolete

A superstructure to Inventory, which gives an image of the company's capital tied with suppliers and subcontractors.

### Agile

Consultant developed solution but with own maintenance and further development. Part of the fundamental master data the Agile system keeps the details in order for the products. The solution is based on an extract from an Oracle database and a small deployment of APD (Analysis Process Designer)

### Business Objects

A prototype based on Xcelsius and Visual Composer is currently under evaluation by the management.

In these solutions, BW, BI, EP, BPS, BSP, ABAP, WAD, Xcelsius and Visual Composer have been used extensively.
